EXPERIENCE

Adobe, Portland — *Software Engineer 30*

6/19 - Date.now();

Unified all related projects into a single monorepo, using VS Code remote containers and yarn 2 to enable sub 3 minutes dev spin up from a fresh clone

Built an express based server to allow for on the fly selection of any built js bundle to be served in any of our environments for ease of testing

Designed and built major components for our component library, redux thunk middlewares, react testing helpers, and storybook deployments

Brought typescript, testing coverage, quality gates, inbuilt documentation, and proper build cycles to our release process and codebase

Intuit, Mountain View — *Senior Software Engineer*

9/16 - 11/17 && 3/18 - 5/19

Designed and built a design data service that exports design values. The admin panel was a k8s served React/express/graphql/mongodb app for which we were awarded a patent

Created bundling tooling and live code editors for internal React component library, implemented theming through styled components

Designed and built out a central express server for qb.com that allowed easy internal extension and the accompanying tools for local dev and creation

Apple, Sunnyvale — *Web Application Developer (Contract)*

4/15 - 9/16

Built and maintained internal asset tracking software that all retail locations used daily

Designed and built various dashboards using D3 for asset health tracking, errant device status and inventory sanity

Previous:

WebMD, Atlanta - *Associate Web Developer* – 10/14 to 3/15

Mammoth Ideas - *Developer (Contract)* – 4/14 to 9/14
